Professional summary

Computer Science graduate with hands-on experience in LLM evaluation, Retrieval-Augmented Generation (RAG), vector retrieval, prompt evaluation, and multimodal AI workflows. Experienced in evaluating Cosine Similarity-based retrieval, testing intent classification, and reviewing multi-turn AI conversations in English and Hinglish. Also experienced in building AI-enabled full-stack applications using Python, FastAPI, React/Next.js, Node.js, MongoDB, Docker, and AWS.

Education

Dr. Shakuntala Misra National Rehabilitation University -Lucknow *Nov 2020 – Aug 2024*

B.Tech in Computer Science

- GPA: 8.56/10.00
- **Coursework:** Distributed Systems, Operating Systems, Data Structures and Algorithms, Database Management Systems, Computer Architecture

Experience

Full-Stack AI Engineer Intern *May 2025 – current*

FoodNest(s) Technologies Pvt Ltd

- Architected and shipped a multi-model AI orchestration pipeline (MCP-based) that routes coding tasks across 6+ LLMs (GLM, DeepSeek, MiniMax, Grok, GPT-5.6) by role — authoring, review, meta-review, testing — cutting per-task inference cost by 95 percent (approx 0.008 usd vs 0.17 usd) versus a single frontier-model baseline.
- Engineered a TF-IDF + BM25 RAG pipeline with auto-invalidating index persistence, wired into a LangGraph-orchestrated async agent backed by Redis semantic vector cache (cosine KNN) and async MongoDB for chat history.
- Deployed a secure, Cloudflare-Access-gated remote gateway enabling distributed developer access to the pipeline via a lightweight local agent — including authenticated enrollment, health-checked heartbeat monitoring, and safe automated repo lifecycle management.

AI Full-Stack developer *Nov 2025 – May 2026*

Brutanix Studios

- Built production Python microservices (FastAPI) with full async/await — WhatsApp webhook server with WebSocket & payment routing, OpenRouter LLM proxy with validation, and a RAG-backed sales chatbot API serving real business clients.
- Developed backend data workflows using MongoDB, Docker, and AWS for document ingestion, vector embeddings, and AI workflow fallback handling.
- Integrated LLM-powered workflows and REST APIs for CRM, ticketing, payments, analytics, and third-party service integrations, improving end-to-end automation across AI-driven applications

React Developer Intern *April 2025 – October 2025*

CrakCode

- Developed and maintained full-stack web applications using Node.js, Firebase, and REST APIs, implementing authentication, database operations, and backend features.
- Built analytics and real-time data processing features while collaborating with Git workflows and gaining experience with Docker and cloud deployments.
- Developed reusable React components and integrated REST APIs to build responsive user interfaces, manage application state, and deliver seamless frontend-to-backend data flows.

Projects

AI Github Assistant *https://github.com/Niliya-Shree/AI-GitHub-Assistant*

- Built a full-stack AI GitHub Assistant using Node.js, Express, and React (Vite) that lets users browse repositories, view, and create GitHub issues through a modern dashboard UI.

- Implemented an MCP (Model Context Protocol) server exposing modular GitHub API tools (`listRepos`, `listIssues`, `createIssue`) consumable by both REST clients and AI agents.
- Integrated a local LLM (TinyLlama via Ollama) to process natural language prompts and autonomously trigger GitHub actions — enabling offline, AI-driven repository automation with zero cloud dependency.

Email AI Classifier Bot *https://github.com/Niliya-Shree/Email-AI-Classifier-Bot*

- Developed a FastAPI backend to serve ML models via REST APIs, classifying Gmail emails into categories and exposing endpoints for automation.
- Built a spam detection model (Naive Bayes, Logistic Regression) with 96.4 percent accuracy, containerized with Docker for scalable deployment.
- Python, scikit-learn, pandas, IMAP/SMTP, Nagrok, Telegram Bot API.

Technical Skills

Languages : Python, JavaScript, C++, Java

AI/LLM : LLM Evaluation, RAG, Cosine Similarity, Vector Embeddings, Intent Classification, Prompt Evaluation

Frontend : React.js, Next.js, TypeScript, Redux, Tailwind CSS

Backend : Node.js, Express, FastAPI, REST APIs

Database : MySQL, MongoDB (Mongoose)

Messaging Integrations : Google analytics, Meta Graph API, WebSockets, Zendesk OAuth, Zoho Mail

DevOps / Tools : Docker, Git, GitHub, GitHub Actions (CI/CD), Linux, Hetzner VPS, Vercel, GCP, Cloudflare
